

MICROSOFT POWERPOINT

COMPLETE PROFESSIONAL VISUAL STUDY MANUAL

Paid Enrollee Course Material

Course Code: EDA-PPT-104

Level: Beginner to Advanced Workplace Use

Duration: 6 Weeks (18 Lessons)

Certificate: Professional Certificate in Microsoft PowerPoint

Prerequisite: Computer Appreciation

Learning Format: Classroom + Guided Practical + Presentation Project

COURSE OVERVIEW

Microsoft PowerPoint is a presentation application used to organise ideas into slides and communicate them visually to an audience. This course teaches both the software skills and the presentation-design thinking needed to create professional classroom, business and training presentations.

Learners will work with slide layouts, text, images, shapes, tables, charts, themes, transitions, animations, Slide Master, hyperlinks, notes, Presenter View, printing/export and presentation delivery.

LEARNING OBJECTIVES

- Navigate the PowerPoint interface and create presentations.
- Plan a presentation around audience, purpose and story.
- Use slide layouts and placeholders effectively.
- Format text with clear visual hierarchy.
- Insert and arrange images, shapes, icons and text boxes.
- Create tables, charts and SmartArt-style diagrams.
- Apply themes, backgrounds and consistent design.
- Use transitions and animations appropriately.
- Use Slide Master for repeated design.
- Add hyperlinks and navigation.
- Use speaker notes and Presenter View.
- Prepare, rehearse, export and deliver professional presentations.

COURSE OUTLINE

Lesson	Topic
1	Getting Started with PowerPoint
2	Understanding the PowerPoint Interface
3	Planning a Presentation
4	Slides, Layouts and Placeholders
5	Text and Typography
6	Images, Shapes, Icons and Text Boxes
7	Tables, Charts and Data
8	Themes, Colours and Backgrounds
9	Alignment, Guides and Visual Hierarchy
10	Transitions
11	Animations
12	Slide Master and Layout Masters
13	Hyperlinks, Action Buttons and Navigation
14	Audio, Video and Media Principles
15	Speaker Notes and Presenter View
16	Printing, PDF Export and Sharing
17	Professional Presentation Delivery
18	Final Professional Presentation Project

LESSON 1: GETTING STARTED WITH POWERPOINT

PowerPoint helps a presenter combine text, visuals, data and media into a sequence of slides.

Presentation Structure

A clear story has a beginning, middle and end

Figure 2. A presentation should have a clear structure.

Common Uses

- Classroom lessons
- Business proposals
- Training sessions
- Project reports
- Sales presentations
- Conference talks

Presentation File

A presentation contains slides. Each slide should support the overall purpose rather than operate as an unrelated page.

Create and Save

Create a blank presentation or approved template, then save early with a meaningful filename.

Step-by-Step Practical

1. Open PowerPoint.
2. Create a blank presentation.
3. Enter a title and subtitle.
4. Save it as EDA-Practice-Presentation.

Review Questions

1. What is PowerPoint?
2. What is a slide?
3. Name four uses of PowerPoint.
4. Why should you save early?

Assignment

Create a three-slide introduction to Ethan Digital Academy.

LESSON 2: UNDERSTANDING THE POWERPOINT INTERFACE

Knowing the interface makes it easier to work quickly and confidently.

Microsoft PowerPoint Interface

A simplified learning view

Figure 1. The PowerPoint working interface.

Main Areas

- Title bar
- Quick Access Toolbar
- Ribbon and tabs
- Slides/thumbnail pane
- Slide canvas
- Notes area
- Status bar
- View controls and zoom

Ribbon

Commands are grouped under tabs such as Home, Insert, Design, Transitions, Animations, Slide Show, Review and View.

Contextual Tools

Some commands appear when a picture, shape, chart or other object is selected.

Step-by-Step Practical

1. Identify each interface area.
2. Switch between Home, Insert and Design.
3. Change the zoom level.
4. Select a slide thumbnail and return to the slide canvas.

Review Questions

1. What is the Ribbon?
2. What is the slide canvas?
3. What is the thumbnail pane?
4. What are contextual tools?

Assignment

Label a simplified PowerPoint interface diagram.

LESSON 3: PLANNING A PRESENTATION

Strong presentations begin with purpose, audience and a clear sequence of ideas.

Presentation Structure

A clear story has a beginning, middle and end

Figure 2. A clear presentation story.

Purpose

Decide whether the presentation should inform, teach, persuade, report or demonstrate.

Audience

Consider what the audience already knows, what they need and what action is expected.

Story Structure

A useful structure is opening, explanation, evidence/examples and conclusion/next action.

Outline First

Write the main message of each slide before spending time on visual design.

Step-by-Step Practical

1. Choose a presentation topic.
2. Define the audience and purpose.
3. Write a 6-slide outline.
4. Give each slide one main message.

Review Questions

1. Why plan before designing?
2. What is audience analysis?

3. Name four story stages.

4. Why should a slide have one main message?

Assignment

Prepare an outline for a 10-slide digital-skills presentation.

LESSON 4: SLIDES, LAYOUTS AND PLACEHOLDERS

Layouts organise content and help maintain consistency.

Slide Layouts

Choose a layout that matches the message

Figure 3. Common PowerPoint slide layouts.

Adding Slides

Use New Slide and choose an appropriate layout.

Placeholders

Placeholders reserve areas for titles, text, images, charts or other content.

Choosing Layouts

Use Title Slide for opening, Section Header for divisions and content layouts for teaching or explanation.

Reordering

Drag slide thumbnails to improve the sequence.

Sections

Sections can group larger presentations into logical parts.

Step-by-Step Practical

1. Create six slides using at least three layouts.
2. Reorder two slides.
3. Duplicate one slide and modify it.
4. Create two presentation sections if supported.

Review Questions

1. What is a layout?
2. What is a placeholder?
3. Why use sections?
4. How can slides be reordered?

Assignment

Build a structured 8-slide deck using suitable layouts.

LESSON 5: TEXT AND TYPOGRAPHY

Text should be readable, concise and visually organised.

Readable Slide Design

Contrast • hierarchy • alignment • space

Figure 4. Readable slide design.

Font Choice

Use readable fonts and avoid excessive typefaces.

Hierarchy

Titles should be visually stronger than body text. Use size, weight and spacing consistently.

Bullets

Bullets help organise short points, but avoid turning every slide into a long document.

Alignment

Choose left, centre or other alignment deliberately.

Editing

Use spelling tools and review wording for clarity.

Step-by-Step Practical

1. Create a title and body slide.
2. Format title, subtitle and body text consistently.
3. Turn a paragraph into concise bullets.
4. Compare a crowded version with a simplified version.

Review Questions

1. What is visual hierarchy?
2. Why limit the number of fonts?
3. When are bullets useful?
4. Why should slide text be concise?

Assignment

Redesign a text-heavy slide into a clear presentation slide.

LESSON 6: IMAGES, SHAPES, ICONS AND TEXT BOXES

Visual objects can explain ideas faster than text when they are relevant and well arranged.

Working with Visuals

Images should support the message

Figure 5. Using visuals intentionally.

Pictures

Insert relevant images, resize proportionally and crop intentionally.

Shapes

Use shapes for diagrams, labels, callouts and visual structure.

Icons

Icons can support scanning when their meaning is clear.

Text Boxes

Text boxes allow flexible placement of short text.

Layering

Bring Forward, Send Backward and Selection Pane help control overlapping objects.

Copyright

Use visuals you created, licensed material or sources you are permitted to use.

Step-by-Step Practical

1. Insert a practice image.
2. Crop it to a suitable area.
3. Add two shapes and a text box.

4. Align the objects and adjust layering.

Review Questions

1. Why maintain image proportions?
2. What is cropping?
3. What does Send Backward do?
4. Why do image permissions matter?

Assignment

Create an illustrated course-introduction slide.

LESSON 7: TABLES, CHARTS AND DATA

Tables show exact values; charts help audiences see patterns and comparisons.

Charts and Data

Use the simplest chart that answers the question

Ask:

What comparison matters?

Can the audience read it quickly?

Is every label necessary?

Figure 6. A simple course-enrolment chart.

Tables

Use tables for compact structured information. Keep them readable and avoid excessive rows on one slide.

Charts

Column, bar, line and pie charts serve different questions. Choose the simplest chart that communicates the point.

Chart Titles and Labels

Use clear titles and only necessary labels.

Data Integrity

Charts should represent the source data accurately and avoid misleading scales or unnecessary effects.

Step-by-Step Practical

1. Create a small 4-row course table.
2. Create a column chart from fictional enrolment data.
3. Add a meaningful chart title.
4. Remove unnecessary chart clutter.

Review Questions

1. When is a table useful?

2. When is a chart useful?
3. Why should charts avoid misleading scales?
4. What makes a chart title useful?

Assignment

Create a data slide comparing four fictional courses.

LESSON 8: THEMES, COLOURS AND BACKGROUNDS

Themes provide coordinated fonts, colours and effects across a presentation.

Readable Slide Design

Contrast • hierarchy • alignment • space

Figure 4. Consistency improves readability.

Theme

A theme creates a consistent visual system.

Variants

Variants can adjust colour and style while retaining the overall theme.

Background

Backgrounds should support readability. Strong contrast between text and background is essential.

Branding

Use approved brand colours, logo placement and typography consistently rather than decorating every slide differently.

Step-by-Step Practical

1. Apply a theme.
2. Compare two variants.
3. Create a simple branded title slide.
4. Check text/background contrast.

Review Questions

1. What is a theme?

2. What is a variant?
3. Why does contrast matter?
4. What makes branding consistent?

Assignment

Create a three-slide Ethan Digital Academy visual style.

LESSON 9: ALIGNMENT, GUIDES AND VISUAL HIERARCHY

Professional slides look organised because objects follow a deliberate visual structure.

Readable Slide Design

Contrast • hierarchy • alignment • space

Figure 4. A strong slide uses hierarchy and space.

Alignment

Use Align Left, Centre, Top or other alignment commands instead of guessing positions.

Distribution

Distribute objects evenly when appropriate.

Guides and Gridlines

Guides help maintain margins and consistent placement.

White Space

Empty space is useful; it separates ideas and reduces clutter.

Hierarchy

Use size, position, contrast and spacing to show what the audience should notice first.

Step-by-Step Practical

1. Create three shapes.
2. Align and distribute them.
3. Turn on guides or gridlines.
4. Rebuild a crowded slide using more white space.

Review Questions

1. What is alignment?
2. What does distribute mean?
3. Why use guides?
4. What is white space?

Assignment

Redesign one slide using alignment and hierarchy principles.

LESSON 10: TRANSITIONS

Transitions control how one slide changes to the next.

Transitions vs Animations

Use motion to guide attention, not distract

Figure 7. Transitions happen between slides.

Purpose

Transitions can signal movement between sections or create a smooth presentation flow.

Consistency

Use one subtle transition for most slides unless a clear reason requires another.

Duration

Control speed carefully; very slow transitions can interrupt the presentation.

Apply to All

Use Apply to All when a consistent transition is desired.

Step-by-Step Practical

1. Apply a subtle transition to one slide.
2. Preview it.
3. Adjust duration.
4. Apply it consistently to the presentation.

Review Questions

1. What is a transition?
2. Why should transitions be subtle?

3. What does Apply to All do?

4. Why does duration matter?

Assignment

Create a five-slide deck with a consistent transition.

LESSON 11: ANIMATIONS

Animations control how objects appear, move, emphasise or exit on a slide.

Transitions vs Animations

Use motion to guide attention, not distract

Figure 7. Animations affect objects on a slide.

Animation Types

- Entrance
- Emphasis
- Exit
- Motion path

Animation Pane

The Animation Pane shows order and timing.

Start Options

Animations can start On Click, With Previous or After Previous.

Purpose

Use animation to reveal steps, explain a process or focus attention - not simply because effects are available.

Step-by-Step Practical

1. Animate three bullet points to appear one at a time.
2. Open the Animation Pane.
3. Change the order.
4. Compare On Click and After Previous.

Review Questions

1. What is animation?
2. Name four animation categories.
3. What is the Animation Pane?
4. When is animation useful?

Assignment

Create an instructional process slide using restrained animation.

LESSON 12: SLIDE MASTER AND LAYOUT MASTERS

Slide Master controls repeated design across many slides.

Slide Master

Control repeated design from one place

Figure 8. Slide Master controls repeated design.

Master Elements

Logo position, fonts, colours, placeholders and recurring footer elements can be controlled from the master.

Layouts

Individual layouts inherit design from the master and can have different placeholder arrangements.

Efficiency

Master editing avoids changing the same design manually on every slide.

Caution

Make master changes carefully because they can affect many slides at once.

Step-by-Step Practical

1. Open Slide Master view.
2. Identify the main master and layouts.
3. Add a small practice footer or approved logo placeholder.
4. Close Master View and inspect several slides.

Review Questions

1. What is Slide Master?
2. What is a layout master?

3. Why is master editing efficient?

4. Why should master changes be made carefully?

Assignment

Create a simple branded master for a training presentation.

LESSON 13: HYPERLINKS, ACTION BUTTONS AND NAVIGATION

Interactive navigation can create menus, non-linear lessons and self-paced presentations.

Hyperlinks and Navigation

Create controlled movement through a presentation

Figure 10. Internal presentation navigation.

Hyperlinks

Link text or objects to websites, files or another slide when appropriate.

Internal Links

Internal slide links can create a menu or return-to-home navigation.

Action Buttons

Action buttons provide familiar navigation controls.

Testing

Always test links in Slide Show mode before delivery.

Safety

Use trusted destinations and avoid linking learners to unsafe or unrelated sites.

Step-by-Step Practical

1. Create a menu slide.
2. Link two buttons to different slides.
3. Add a Back to Menu button.
4. Test all navigation in Slide Show mode.

Review Questions

1. What is a hyperlink?
2. What is an internal slide link?
3. What is an action button?
4. Why must navigation be tested?

Assignment

Create a five-slide interactive lesson menu.

LESSON 14: AUDIO, VIDEO AND MEDIA PRINCIPLES

Media can demonstrate processes and increase engagement when it directly supports the lesson.

Working with Visuals

Images should support the message

Figure 5. Visuals and media should support the message.

Video

Use short relevant clips and test playback before presenting.

Audio

Audio can support narration, language learning or demonstrations. Keep levels appropriate.

File Size

Embedded media can increase presentation size significantly.

Accessibility

Provide captions or text alternatives where possible and appropriate.

Reliability

Keep a backup plan in case media playback or internet access fails.

Step-by-Step Practical

1. Insert an instructor-approved short media file if available.
2. Resize and position it.
3. Set an appropriate playback option.
4. Create a backup text/image explanation of the same point.

Review Questions

1. Why should media be relevant?
2. How can media affect file size?
3. Why are captions useful?
4. Why prepare a backup?

Assignment

Design a media-supported teaching slide.

LESSON 15: SPEAKER NOTES AND PRESENTER VIEW

Speaker notes let presenters keep supporting information without crowding the slide.

Speaker Notes and Presenter View

Slides support the audience; notes support the presenter

Figure 9. Presenter notes support delivery.

Notes

Store explanations, examples, reminders and source details in the Notes area.

Presenter View

Presenter View can show the current slide, next slide, notes and timing tools to the presenter.

Audience View

The audience should see the slide show, not private notes.

Rehearsal

Use notes as prompts rather than reading every word.

Step-by-Step Practical

1. Add speaker notes to three slides.
2. Start Slide Show/Presenter View if available.
3. Practice explaining the slide without reading it word-for-word.
4. Add a timing reminder.

Review Questions

1. What are speaker notes?
2. What can Presenter View show?

3. Should the audience see private notes?

4. Why should notes be prompts?

Assignment

Prepare speaker notes for a five-slide mini-presentation.

LESSON 16: PRINTING, PDF EXPORT AND SHARING

A finished presentation may need to be printed, exported or shared in different formats.

Speaker Notes and Presenter View

Slides support the audience; notes support the presenter

Figure 9. Prepare presentation content for different audiences.

Print Options

Print full-page slides, notes pages or handouts depending on purpose.

PDF Export

PDF preserves the visual layout for distribution, but animations and interactive features do not behave like a live slide show.

Sharing

Check permissions and remove sensitive notes or hidden content before external sharing.

Compatibility

Test the file on the presentation computer or export a backup PDF when compatibility is uncertain.

Step-by-Step Practical

1. Open Print Preview.
2. Compare full-page slides and handouts.
3. Export a practice PDF.
4. Review the PDF for layout and missing content.

Review Questions

1. What is a handout?

2. Why export to PDF?
3. What may be lost in PDF?
4. Why check notes before sharing?

Assignment

Export a professional presentation and a handout version.

LESSON 17: PROFESSIONAL PRESENTATION DELIVERY

Good delivery combines preparation, clear speaking, audience awareness and confident use of slides.

Presentation Delivery

Design + rehearsal + delivery

Figure 11. Prepare, rehearse, present and review.

Preparation

Know the purpose, room, equipment and time limit.

Rehearsal

Practise the sequence and timing. Identify difficult transitions between topics.

Delivery

Speak clearly, face the audience where practical and use slides as visual support.

Questions

Listen carefully, answer what you know and say when further checking is needed.

Feedback

Use audience or instructor feedback to improve future presentations.

Step-by-Step Practical

1. Rehearse a five-minute presentation.
2. Time the delivery.
3. Practise moving between slides without rushing.
4. Answer two instructor questions.
5. Write two improvements after feedback.

Review Questions

1. Why rehearse?
2. What role should slides play during delivery?
3. How should uncertain questions be handled?
4. Why is feedback useful?

Assignment

Deliver a five-minute professional presentation.

LESSON 18: FINAL PROFESSIONAL PRESENTATION PROJECT

The final project combines planning, design, visuals, data, navigation and delivery into one professional presentation.

Final Presentation Project

Plan → Design → Build → Rehearse → Deliver

Figure 12. The complete presentation workflow.

Project Brief

Create a 12-15 slide presentation introducing one Ethan Digital Academy programme or explaining a professional digital topic.

Required Elements

- Title slide
- Clear audience and purpose
- Logical sections
- Consistent theme
- Relevant images/shapes
- At least one table or chart
- Appropriate transition
- At least one restrained animation
- Speaker notes
- Conclusion and CTA
- PDF export

Quality Criteria

Accuracy, visual hierarchy, consistency, readability, appropriate visuals, logical flow and professional delivery.

Step-by-Step Practical

1. Plan the presentation outline.

2. Build the slide master/theme.
3. Create 12-15 slides.
4. Add visuals and one data display.
5. Add notes, transitions and restrained animation.
6. Check alignment and consistency.
7. Export a PDF backup.
8. Rehearse and deliver.

Review Questions

1. What makes a presentation professional?
2. Why is Slide Master useful?
3. Why should visuals support the message?
4. What should be checked before delivery?

Assignment

Submit the PPTX, PDF backup and deliver the final presentation.

REAL-LIFE CASE STUDY - ETHAN DIGITAL ACADEMY

Ethan Digital Academy needs a presentation for a professional digital training programme. The presenter first defines the audience and purpose, then creates a logical outline. A consistent Slide Master controls branding, while images, shapes and a simple chart explain the offer. Speaker notes hold the detailed explanation so the slides remain uncluttered. The presentation is rehearsed, exported to PDF as a backup and delivered within the agreed time.

FINAL PRACTICAL PROJECT - 100 MARKS

1. Define the audience, purpose and presentation objective.
2. Create a 12-15 slide outline.
3. Use appropriate layouts and a consistent visual system.
4. Apply readable typography and visual hierarchy.
5. Use relevant images, shapes or icons.
6. Include one table or chart.
7. Use a subtle transition and at least one purposeful animation.
8. Add speaker notes and internal navigation where useful.
9. Export and inspect a PDF backup.
10. Rehearse and deliver the presentation professionally.

QUIZ - 30 QUESTIONS

1. What is PowerPoint?
2. What is a slide?
3. What is the Ribbon?
4. What is the thumbnail pane?
5. Why plan a presentation?
6. What is a placeholder?
7. What is a slide layout?
8. What is visual hierarchy?
9. Why should slide text be concise?
10. What is cropping?
11. What does Send Backward do?
12. When is a table useful?

13. When is a chart useful?
14. What is a theme?
15. Why does contrast matter?
16. What is alignment?
17. What is white space?
18. What is a transition?
19. What is an animation?
20. Name four animation categories.
21. What is the Animation Pane?
22. What is Slide Master?
23. Why use a master?
24. What is an internal hyperlink?
25. What is an action button?
26. Why should media have a backup?
27. What are speaker notes?
28. What is Presenter View?
29. Why export to PDF?
30. Why rehearse a presentation?

FINAL EXAMINATION - 100 MARKS

Section A - Objective Questions (20 Marks)

Twenty questions covering interface, layouts, typography, visuals, charts, themes, transitions, animations, Slide Master and delivery.

Section B - Short Answer and Design Analysis (30 Marks)

Explain presentation concepts and recommend improvements to realistic slide-design situations.

Section C - Practical Presentation Assessment (50 Marks)

Create and present a professional slide deck from a supplied brief using appropriate layouts, visual hierarchy, data, notes and export.

COURSE COMPLETION OUTCOME

Graduates of EDA-PPT-104 Microsoft PowerPoint will be able to plan, design, build, export and deliver professional presentations for classroom, business and training use. They will understand both PowerPoint tools and the communication principles that make slides effective.
