

ETHAN DIGITAL ACADEMY

TYPING & KEYBOARD MASTERY

FULL VISUAL STUDY MANUAL

Home Row Position

The starting point for touch typing

Left hand

A S D F

Right hand

J K L ;

Index guides

F and J usually have raised markers

Thumbs

Rest lightly near the Space bar

Course Code	EDA-TYP-108
Level	Beginner to Professional Everyday Use
Duration	4 Weeks (19 Lessons)
Certificate	Professional Certificate in Typing & Keyboard Mastery
Prerequisite	Computer Appreciation
Learning Format	Classroom + Guided Typing Drills + Timed Practicals + Final Project

This course develops accurate, efficient keyboard use. Progress is based on each learner's own accuracy, technique and improvement rather than comparison with other learners.

Course Introduction

Typing is a core digital skill used in documents, spreadsheets, email, online forms, coding and business administration. This manual teaches keyboard layout, touch-typing foundations, letters, numbers, punctuation, navigation, shortcuts, accuracy, speed measurement and professional copy typing.

Learning Objectives

- Identify major keyboard sections and important keys.
- Use correct home-row finger placement and controlled typing technique.
- Type letters, numbers, punctuation and symbols accurately.
- Navigate and edit text efficiently with keyboard controls.
- Use essential productivity shortcuts.
- Measure typing speed and accuracy responsibly.
- Produce professional copy-typed documents and numeric entries.

Course Structure

1. Lesson 1: Introduction to Typing and Keyboard Mastery
2. Lesson 2: Keyboard Layout and Main Key Groups
3. Lesson 3: Typing Posture and Ergonomics
4. Lesson 4: Home Row and Finger Placement
5. Lesson 5: Home Row Drills and Rhythm
6. Lesson 6: Top Row Letters
7. Lesson 7: Bottom Row Letters
8. Lesson 8: Capital Letters, Shift and Caps Lock
9. Lesson 9: Numbers and Number-Row Skills
10. Lesson 10: Numeric Keypad and Data Entry
11. Lesson 11: Punctuation and Special Characters
12. Lesson 12: Backspace, Delete and Editing Control
13. Lesson 13: Keyboard Navigation
14. Lesson 14: Essential Productivity Shortcuts
15. Lesson 15: Typing Accuracy and Error Reduction
16. Lesson 16: Typing Speed and WPM
17. Lesson 17: Copy Typing and Document Production
18. Lesson 18: Practice Planning and Building Consistency
19. Lesson 19: Final Typing & Keyboard Mastery Project

Lesson 1: Introduction to Typing and Keyboard Mastery

Introduction

Typing is the skill of entering text and data accurately and efficiently with a keyboard. Keyboard mastery also includes navigation, shortcuts, number entry and good working habits.

Learning Objectives

- Explain the main ideas in introduction to typing and keyboard mastery.
- Complete the practical exercise for introduction to typing and keyboard mastery.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Touch typing means using trained finger positions with reduced need to look at the keys.

Key point: Accuracy is the foundation of useful speed.

Key point: Keyboard knowledge improves work in word processing, spreadsheets, email and online forms.

Key point: Progress is best measured against your own earlier performance rather than other learners.

Step-by-Step Guided Practical

1. Identify the keyboard on your computer.
2. Type your full name and a short sentence slowly.
3. Record which keys you looked for.
4. Write one personal typing goal for the course.

Ethan Digital Academy Case Study

Ethan Digital Academy learners need reliable typing for assignments, spreadsheets, email, coding and digital-business tasks.

Review Questions

20. What is the main purpose of introduction to typing and keyboard mastery?
21. State two correct techniques from this lesson.
22. What common mistake should a learner avoid?
23. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 1 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 2: Keyboard Layout and Main Key Groups

Introduction

A standard computer keyboard contains several groups of keys. Knowing their locations reduces hesitation and helps users work without unnecessary mouse movement.

Learning Objectives

- Explain the main ideas in keyboard layout and main key groups.
- Complete the practical exercise for keyboard layout and main key groups.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: The alphanumeric area contains letters, numbers and punctuation.

Key point: Function keys F1-F12 perform application-specific actions.

Key point: Navigation keys include arrows, Home, End, Page Up and Page Down.

Key point: Modifier keys such as Shift, Ctrl and Alt work with other keys.

Key point: Some keyboards include a numeric keypad for repeated number entry.

Figure 2: Instructional visual for Keyboard Layout and Main Key Groups.

Step-by-Step Guided Practical

1. Locate each main key group.
2. Press letter, number and navigation keys in a blank practice document.
3. Find Ctrl, Alt, Shift, Enter, Backspace, Delete and Tab.
4. Close the document without saving if it is only a practice.

Ethan Digital Academy Case Study

Office learners should be able to identify keys quickly before moving into Word, Excel or other productivity applications.

Review Questions

24. What is the main purpose of keyboard layout and main key groups?
25. State two correct techniques from this lesson.
26. What common mistake should a learner avoid?
27. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 2 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 3: Typing Posture and Ergonomics

Introduction

Comfortable posture helps learners type for longer periods with less unnecessary strain. Typing should feel controlled rather than tense.

Learning Objectives

- Explain the main ideas in typing posture and ergonomics.
- Complete the practical exercise for typing posture and ergonomics.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Sit with the back supported and shoulders relaxed.

Key point: Keep wrists in a neutral position instead of sharply bending them upward or downward.

Key point: Place the screen where it can be viewed comfortably.

Key point: Keep fingers curved lightly over the keyboard.

Key point: Take normal breaks during extended computer work and report persistent discomfort to a trusted adult, teacher or appropriate professional.

Figure 3: Instructional visual for Typing Posture and Ergonomics.

Step-by-Step Guided Practical

1. Adjust your chair and screen for comfortable viewing.
2. Place both feet in a stable position.
3. Relax shoulders and place hands lightly over the keyboard.
4. Type one paragraph slowly while checking that your wrists remain neutral.

Ethan Digital Academy Case Study

A training lab should arrange workstations so learners can type comfortably rather than stretching toward the keyboard or screen.

Review Questions

28. What is the main purpose of typing posture and ergonomics?
29. State two correct techniques from this lesson.
30. What common mistake should a learner avoid?
31. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 3 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 4: Home Row and Finger Placement

Introduction

The home row is the basic resting position used in touch typing. On a QWERTY keyboard the left hand rests on A-S-D-F and the right hand on J-K-L-semicolon.

Learning Objectives

- Explain the main ideas in home row and finger placement.
- Complete the practical exercise for home row and finger placement.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: The F and J keys commonly have raised guides for the index fingers.

Key point: Each finger returns to its home position after reaching another key.

Key point: Thumbs are used mainly for the Space bar.

Key point: Hands should remain relaxed; forceful keystrokes do not improve speed.

Figure 4: Instructional visual for Home Row and Finger Placement.

Step-by-Step Guided Practical

1. Place left fingers on A S D F and right fingers on J K L ;.

2. Find F and J by touch using the raised guides.
3. Type: asdf jkl; repeatedly at a slow rhythm.
4. Add spaces between groups without looking down as much as possible.

Ethan Digital Academy Case Study

Home-row practice gives Academy learners a consistent starting point for later speed-building exercises.

Review Questions

32. What is the main purpose of home row and finger placement?
33. State two correct techniques from this lesson.
34. What common mistake should a learner avoid?
35. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 4 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 5: Home Row Drills and Rhythm

Introduction

Typing rhythm means pressing keys at a steady pace. Smooth rhythm usually produces better accuracy than rushing.

Learning Objectives

- Explain the main ideas in home row drills and rhythm.
- Complete the practical exercise for home row drills and rhythm.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Begin slowly enough to avoid repeated errors.

Key point: Use light, even keystrokes.

Key point: Return fingers to home row after each reach.

Key point: Practise short sessions regularly rather than one long, exhausting session.

Step-by-Step Guided Practical

1. Type: asdf jkl; 10 times.
2. Type: sad lad fall ask flask.
3. Pause, reset hand position and repeat.
4. Count errors and correct the technique rather than simply increasing speed.

Ethan Digital Academy Case Study

A learner who makes many mistakes should reduce speed temporarily and rebuild the correct movement pattern.

Review Questions

36. What is the main purpose of home row drills and rhythm?
37. State two correct techniques from this lesson.
38. What common mistake should a learner avoid?
39. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 5 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 6: Top Row Letters

Introduction

The top letter row contains Q W E R T Y U I O P. Each key is reached by the finger assigned from the home row.

Learning Objectives

- Explain the main ideas in top row letters.
- Complete the practical exercise for top row letters.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Left fingers reach Q-W-E while the left index handles R and T.

Key point: The right index handles Y and U; the remaining right fingers reach I-O-P.

Key point: After pressing a top-row key, return toward the home position.

Key point: Practise difficult combinations separately.

Figure 6: Instructional visual for Top Row Letters.

Step-by-Step Guided Practical

1. Warm up on home row.

2. Type: qwer uiop slowly.
3. Practise: tree, quiet, power, write, type.
4. Write one sentence containing at least five top-row letters.

Ethan Digital Academy Case Study

Typing course names such as PowerPoint, Word and Internet becomes easier as top-row control improves.

Review Questions

40. What is the main purpose of top row letters?
41. State two correct techniques from this lesson.
42. What common mistake should a learner avoid?
43. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 6 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 7: Bottom Row Letters

Introduction

The bottom letter row contains Z X C V B N M and punctuation keys. Controlled downward reaches are needed without collapsing the wrist.

Learning Objectives

- Explain the main ideas in bottom row letters.
- Complete the practical exercise for bottom row letters.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Left fingers reach Z-X-C while the left index handles V and B.

Key point: The right index handles N and M; other right fingers reach comma, full stop and slash on common layouts.

Key point: Return to home row after each reach.

Key point: Punctuation practice is essential for professional writing.

Step-by-Step Guided Practical

1. Type: zxcv bnm,./ slowly.
2. Practise: can, mix, zoom, comma, value.
3. Type three short sentences using commas and full stops.
4. Review which bottom-row key causes the most errors.

Ethan Digital Academy Case Study

Accurate punctuation helps learners produce professional emails, reports and assignments.

Review Questions

44. What is the main purpose of bottom row letters?
45. State two correct techniques from this lesson.
46. What common mistake should a learner avoid?
47. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 7 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 8: Capital Letters, Shift and Caps Lock

Introduction

Capital letters are normally produced with Shift for individual capitals or Caps Lock for a continuous uppercase section.

Learning Objectives

- Explain the main ideas in capital letters, shift and caps lock.
- Complete the practical exercise for capital letters, shift and caps lock.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Use the Shift key with the opposite hand when practical for balanced touch typing.

Key point: Caps Lock is useful for a run of capitals but can cause accidental uppercase text if left on.

Key point: Shift also produces the upper symbols on many number-row keys.

Key point: Professional writing uses capitals according to normal language rules, not for every word.

Shift, Caps Lock and Symbols

Choose the correct key for the job

Shift One capital letter or upper symbol	Caps Lock Continuous capital letters
Number row Numbers and shifted symbols	Punctuation Practise commas, full stops, apostrophes and question marks

Figure 8: Instructional visual for Capital Letters, Shift and Caps Lock.

Step-by-Step Guided Practical

1. Type five names using Shift for the first letter.

2. Type ETHAN DIGITAL ACADEMY using Caps Lock, then turn it off.
3. Practise symbols such as ! ? : where available on your keyboard.
4. Correct any accidental capitals.

Ethan Digital Academy Case Study

Learners can type headings efficiently while keeping normal paragraph text in sentence case.

Review Questions

48. What is the main purpose of capital letters, shift and caps lock?
49. State two correct techniques from this lesson.
50. What common mistake should a learner avoid?
51. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 8 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 9: Numbers and Number-Row Skills

Introduction

The number row is used for dates, quantities, prices and many forms of data entry. Accuracy is especially important because one wrong digit can change meaning significantly.

Learning Objectives

- Explain the main ideas in numbers and number-row skills.
- Complete the practical exercise for numbers and number-row skills.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: The number row sits above the letter keys on standard keyboards.

Key point: Shift often produces symbols such as ! @ # and others depending on layout.

Key point: Numeric data should be checked carefully after entry.

Key point: Use consistent formats for dates, amounts and percentages.

Step-by-Step Guided Practical

1. Type numbers 1 to 0 forward and backward.
2. Type fictional amounts: 1500, 2750, 10000.
3. Type dates in one consistent format.
4. Compare your typed numbers with the source and correct any errors.

Ethan Digital Academy Case Study

Finance and business tasks require careful numeric entry; a fast but incorrect amount is not useful.

Review Questions

52. What is the main purpose of numbers and number-row skills?
53. State two correct techniques from this lesson.
54. What common mistake should a learner avoid?
55. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 9 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 10: Numeric Keypad and Data Entry

Introduction

A numeric keypad, when available, provides a calculator-like layout for repeated number entry. Some laptops use alternative keypad arrangements.

Learning Objectives

- Explain the main ideas in numeric keypad and data entry.
- Complete the practical exercise for numeric keypad and data entry.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Num Lock may control whether keypad keys enter numbers or perform navigation.

Key point: The keypad can improve efficiency for long numeric lists after practice.

Key point: The decimal point and arithmetic keys are useful in spreadsheet work.

Key point: Users should still verify entered data against the source.

Figure 10: Instructional visual for Numeric Keypad and Data Entry.

Step-by-Step Guided Practical

1. If your keyboard has a keypad, locate 0-9, decimal point and Enter.

2. Type a fictional list of ten amounts.
3. Repeat the list using the number row and compare comfort.
4. Check every value for accuracy.

Ethan Digital Academy Case Study

An administrative assistant entering fictional fee data can use the keypad while maintaining a deliberate verification routine.

Review Questions

56. What is the main purpose of numeric keypad and data entry?
57. State two correct techniques from this lesson.
58. What common mistake should a learner avoid?
59. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 10 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 11: Punctuation and Special Characters

Introduction

Professional typing requires more than letters. Punctuation controls meaning, and special characters appear in email addresses, web addresses, passwords and documents.

Learning Objectives

- Explain the main ideas in punctuation and special characters.
- Complete the practical exercise for punctuation and special characters.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Practise full stop, comma, apostrophe, quotation marks, colon, semicolon, question mark and brackets.

Key point: The exact position of symbols can vary by keyboard layout.

Key point: Do not guess unfamiliar symbols; identify them before typing important information.

Key point: Spacing around punctuation should follow the writing style being used.

Step-by-Step Guided Practical

1. Type five sentences using commas and full stops.
2. Type two questions.
3. Type a fictional email address such as learner@example.com.
4. Type a harmless sample web address and check every character.

Ethan Digital Academy Case Study

Correct punctuation helps Academy learners communicate clearly and enter online information accurately.

Review Questions

60. What is the main purpose of punctuation and special characters?
61. State two correct techniques from this lesson.
62. What common mistake should a learner avoid?
63. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 11 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 12: Backspace, Delete and Editing Control

Introduction

Efficient typists correct errors without losing their place. Backspace and Delete remove text in different directions in many editors.

Learning Objectives

- Explain the main ideas in backspace, delete and editing control.
- Complete the practical exercise for backspace, delete and editing control.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Backspace commonly removes the character to the left of the insertion point.

Key point: Delete commonly removes the character to the right or selected content.

Key point: Selection lets users replace or format a whole block efficiently.

Key point: Undo can reverse an accidental change in many applications.

Step-by-Step Guided Practical

1. Type a sentence with three deliberate errors.
2. Use Backspace to correct one.
3. Move the cursor and use Delete to correct another.
4. Select and replace the final error.
5. Use Undo and Redo once to observe the effect.

Ethan Digital Academy Case Study

Learners should correct mistakes efficiently instead of deleting an entire paragraph and typing it again.

Review Questions

64. What is the main purpose of backspace, delete and editing control?
65. State two correct techniques from this lesson.
66. What common mistake should a learner avoid?
67. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 12 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 13: Keyboard Navigation

Introduction

Keyboard navigation moves the insertion point and selection through documents. It reduces unnecessary switching between keyboard and mouse.

Learning Objectives

- Explain the main ideas in keyboard navigation.
- Complete the practical exercise for keyboard navigation.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Arrow keys move by character or line.

Key point: Home and End commonly move to the beginning or end of a line.

Key point: Ctrl plus arrow keys often moves by words or larger units in many editors.

Key point: Shift combined with navigation keys can select text in many applications.

Figure 13: Instructional visual for Keyboard Navigation.

Step-by-Step Guided Practical

1. Type a short paragraph.

2. Move through it using only arrow keys.
3. Use Home and End.
4. Try Ctrl+Left and Ctrl+Right in a supported editor.
5. Select one phrase using Shift plus arrow keys.

Ethan Digital Academy Case Study

Fast navigation is valuable when editing long course notes, reports and email drafts.

Review Questions

68. What is the main purpose of keyboard navigation?
69. State two correct techniques from this lesson.
70. What common mistake should a learner avoid?
71. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 13 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 14: Essential Productivity Shortcuts

Introduction

Keyboard shortcuts combine modifier keys with another key to perform common actions quickly. Shortcuts can vary by operating system and application.

Learning Objectives

- Explain the main ideas in essential productivity shortcuts.
- Complete the practical exercise for essential productivity shortcuts.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Common Windows-style shortcuts include Ctrl+C copy, Ctrl+V paste, Ctrl+X cut and Ctrl+Z undo.

Key point: Ctrl+A often selects all; Ctrl+S commonly saves.

Key point: Shortcuts should be learned gradually and used only when their effect is understood.

Key point: Always confirm that the correct content is selected before cutting or replacing it.

Essential Keyboard Shortcuts

Common productivity combinations

Ctrl+C / Ctrl+V Copy and paste	Ctrl+X Cut selected content
Ctrl+Z / Ctrl+Y Undo and redo	Ctrl+A / Ctrl+S Select all and save

Figure 14: Instructional visual for Essential Productivity Shortcuts.

Step-by-Step Guided Practical

1. Create a short practice paragraph.
2. Copy one sentence and paste it below.
3. Cut a word and paste it elsewhere.
4. Undo and redo the change.
5. Save the practice file using the normal shortcut in your editor.

Ethan Digital Academy Case Study

Keyboard shortcuts improve productivity in Word, Excel, browsers and many other applications.

Review Questions

72. What is the main purpose of essential productivity shortcuts?
73. State two correct techniques from this lesson.
74. What common mistake should a learner avoid?
75. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 14 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 15: Typing Accuracy and Error Reduction

Introduction

Accuracy measures how correctly text is reproduced. High speed with frequent errors creates extra editing work and can damage data quality.

Learning Objectives

- Explain the main ideas in typing accuracy and error reduction.
- Complete the practical exercise for typing accuracy and error reduction.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Slow down when a particular key combination repeatedly causes errors.

Key point: Practise weak words or letter patterns separately.

Key point: Read from the source in short meaningful groups rather than one character at a time.

Key point: Use spell checking as a review aid, not as a substitute for careful typing.

Key point: Track error patterns so practice targets a real weakness.

Figure 15: Instructional visual for Typing Accuracy and Error Reduction.

Step-by-Step Guided Practical

1. Copy a 100-word practice passage supplied by the instructor.
2. Count obvious typing errors.
3. Calculate accuracy as correct entries relative to total entries using the instructor's method.
4. List your three most common error types.
5. Repeat a short section with focus on accuracy.

Ethan Digital Academy Case Study

A learner preparing an official notice must prioritise correct names, dates and figures over impressive raw typing speed.

Review Questions

76. What is the main purpose of typing accuracy and error reduction?
77. State two correct techniques from this lesson.
78. What common mistake should a learner avoid?
79. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 15 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 16: Typing Speed and WPM

Introduction

Words per minute (WPM) is a common typing-speed measure. A standard calculation often treats five characters, including spaces, as one word, although testing platforms may use their own method.

Learning Objectives

- Explain the main ideas in typing speed and wpm.
- Complete the practical exercise for typing speed and wpm.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Gross WPM measures output before considering errors.

Key point: Useful performance combines speed and accuracy.

Key point: Timed tests should use comparable passage length and conditions when tracking progress.

Key point: A learner's goal should be steady personal improvement rather than unhealthy competition.

Figure 16: Instructional visual for Typing Speed and WPM.

Step-by-Step Guided Practical

1. Use a safe instructor-provided typing passage.

2. Type for one minute at a comfortable pace.
3. Record the platform or instructor's WPM and accuracy result.
4. Repeat after a short rest.
5. Write one technique that improved the second attempt.

Ethan Digital Academy Case Study

Academy instructors can track each learner's own baseline and improvement without ranking bodies or personal traits.

Review Questions

80. What is the main purpose of typing speed and wpm?
81. State two correct techniques from this lesson.
82. What common mistake should a learner avoid?
83. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 16 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 17: Copy Typing and Document Production

Introduction

Copy typing means reproducing text from a source accurately. It combines reading, keyboard control, punctuation, spacing and formatting.

Learning Objectives

- Explain the main ideas in copy typing and document production.
- Complete the practical exercise for copy typing and document production.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Read ahead in small groups of words.

Key point: Keep the source positioned where it can be viewed comfortably.

Key point: Preserve paragraph breaks and punctuation.

Key point: Check names, dates and numbers carefully.

Key point: Proofread the finished document against the source.

Step-by-Step Guided Practical

1. Copy a 150-word fictional business memo.
2. Reproduce the title and paragraphs.
3. Check punctuation and spacing.
4. Use keyboard navigation to correct errors.
5. Save the file with a clear name.

Ethan Digital Academy Case Study

A learner may be asked to type a course announcement from an approved source document for classroom practice.

Review Questions

84. What is the main purpose of copy typing and document production?
85. State two correct techniques from this lesson.
86. What common mistake should a learner avoid?

87. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 17 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 18: Practice Planning and Building Consistency

Introduction

Keyboard mastery develops through regular focused practice. A simple plan helps learners improve weak areas while maintaining good technique.

Learning Objectives

- Explain the main ideas in practice planning and building consistency.
- Complete the practical exercise for practice planning and building consistency.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: Begin with a short warm-up.

Key point: Choose one focus area such as top row, numbers or punctuation.

Key point: Use a short timed exercise only after accuracy practice.

Key point: Record WPM, accuracy and recurring errors.

Key point: Set a realistic next target based on your own results.

Figure 18: Instructional visual for Practice Planning and Building Consistency.

Step-by-Step Guided Practical

1. Create a seven-day typing practice table.
2. Include 10-20 minute sessions rather than excessive practice.
3. Assign one focus area to each day.
4. Add columns for WPM, accuracy and notes.
5. Complete one session and record the result.

Ethan Digital Academy Case Study

An Academy learner can use a simple progress sheet to see improvement over the course rather than relying on memory.

Review Questions

88. What is the main purpose of practice planning and building consistency?
89. State two correct techniques from this lesson.
90. What common mistake should a learner avoid?
91. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 18 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Lesson 19: Final Typing & Keyboard Mastery Project

Introduction

The final project demonstrates complete keyboard control through copy typing, professional document entry, numeric data, editing shortcuts and a timed accuracy test.

Learning Objectives

- Explain the main ideas in final typing & keyboard mastery project.
- Complete the practical exercise for final typing & keyboard mastery project.
- Apply accurate, comfortable and professional keyboard technique.

Teaching Content

Key point: The project uses fictional and non-sensitive information.

Key point: Accuracy is weighted heavily because workplace typing must be reliable.

Key point: Learners should demonstrate correct posture and controlled technique.

Key point: Shortcuts and navigation should be used appropriately, not merely for display.

Key point: The final reflection should identify strengths and a practical improvement goal.

Final Keyboard Mastery Project

Demonstrate accuracy, speed and document control

Copy typing Reproduce a passage accurately	Business text Type a professional memo	Numbers Enter a short numeric table
Shortcuts Complete editing tasks efficiently	Timed test Record WPM and accuracy	Reflection Set a personal improvement target

Figure 19: Instructional visual for Final Typing & Keyboard Mastery Project.

Step-by-Step Guided Practical

1. Complete a timed copy-typing passage.
2. Type a one-page fictional business memo.
3. Enter a short table of fictional numbers and amounts.
4. Correct deliberate errors using navigation and shortcuts.
5. Record WPM and accuracy using the instructor's method.
6. Write a 150-word reflection on your progress.

Ethan Digital Academy Case Study

This project reflects the typing demands learners will meet in documents, spreadsheets, email and digital administration.

Review Questions

92. What is the main purpose of final typing & keyboard mastery project?
93. State two correct techniques from this lesson.
94. What common mistake should a learner avoid?
95. How does this skill improve academic or workplace productivity?

Assignment

Repeat the Lesson 19 exercise. Record errors or difficulties, then write 80-120 words describing what improved and what you will practise next.

Final Practical Project - 100 Marks

Component	Marks	Requirement
Posture and home-row technique	10	Demonstrate relaxed, correct starting position.
Copy typing accuracy	25	Reproduce an instructor-provided passage accurately.
Professional memo	15	Type and format a one-page fictional business memo.
Numeric data entry	15	Enter a fictional table of dates, quantities and amounts accurately.
Navigation and shortcuts	15	Complete editing tasks using appropriate keyboard controls.
Timed typing test	15	Record WPM and accuracy under consistent conditions.
Reflection	5	Identify progress and one realistic next goal.

Course Quiz - 30 Questions

1. What is touch typing?
2. Why is accuracy important?
3. Name four main keyboard zones.
4. Which keys form the left-hand home row?
5. Which keys form the right-hand home row?
6. What is special about F and J on many keyboards?
7. Which finger normally presses the Space bar?
8. Why should shoulders remain relaxed?
9. What is the purpose of Shift?
10. When is Caps Lock useful?
11. Why must numeric data be checked carefully?
12. What does Backspace usually remove?
13. What does Delete usually remove?
14. What do arrow keys do?
15. What does Home commonly do in a text editor?
16. What is Ctrl+C commonly used for?
17. What is Ctrl+V commonly used for?
18. What is Ctrl+Z commonly used for?
19. What is Ctrl+S commonly used for?
20. Why should content be selected carefully before using Cut?
21. What is punctuation practice useful for?
22. What is copy typing?
23. Why should a learner read ahead in small word groups?
24. What does WPM stand for?
25. Why should WPM be considered together with accuracy?
26. What is a timed typing test?
27. Why should learners track their own progress?

28. Name one benefit of short regular practice.
29. What should you do when one key combination causes repeated errors?
30. List three skills demonstrated in the final project.

Final Examination - 100 Marks

Section A - Keyboard Knowledge (20 marks)

Explain keyboard zones, home row, modifier keys, navigation keys and numeric-entry options.

Section B - Technique and Accuracy (20 marks)

Explain posture, finger placement, rhythm, error reduction and why accuracy comes before speed.

Section C - Editing and Shortcuts (20 marks)

Describe Backspace, Delete, selection, navigation and at least six common productivity shortcuts.

Section D - Practical Typing (20 marks)

Complete an instructor-provided copy-typing and numeric-entry exercise with emphasis on accuracy.

Section E - Speed and Improvement Planning (20 marks)

Explain WPM, accuracy measurement, practice planning and how a learner can track personal improvement.

Course Completion Outcome

After successful completion, the learner should be able to use a computer keyboard confidently, apply home-row touch-typing principles, enter letters and numbers accurately, use punctuation and symbols, navigate and edit text efficiently, apply common keyboard shortcuts, complete copy-typing tasks and monitor personal typing speed and accuracy.

Professional Practice Checklist

- Accuracy before speed.
- Relaxed posture and neutral wrists.
- Return fingers toward home row.
- Check names, dates and numbers carefully.
- Use shortcuts only when their effect is understood.
- Practise regularly in short focused sessions.
- Measure improvement against your own earlier performance.
