

MICROSOFT WORD

**COMPLETE PROFESSIONAL STUDY MANUAL
FULL VISUAL EDITION**

Paid Enrollee Course Material

Course Code: EDA-WRD-102

Level: Beginner to Intermediate

Duration: 6 Weeks / 18 Lessons

Certificate: Professional Certificate in Microsoft Word

Prerequisite: Computer Appreciation

Learning Format: Classroom + Guided Practical + Independent Practice

COURSE OVERVIEW

Microsoft Word is a word-processing application used to create, edit, format, organize, review, print and share documents. This course is designed as a complete student study manual rather than a short module outline. It develops practical skills for academic work, office administration, business communication and remote work.

Learners will work through explanations, examples, step-by-step procedures, practical exercises, workplace case studies, review questions, assignments and a final professional project.

LEARNING OBJECTIVES

- Explain the purpose and major features of Microsoft Word.
- Navigate the Word interface confidently.
- Create, save, open and organize documents.
- Enter, select and edit text efficiently.
- Apply professional character and paragraph formatting.
- Use page layout tools correctly.
- Create and format tables.
- Insert and arrange pictures, shapes, icons and text boxes.
- Use headers, footers and page numbers.
- Use styles, themes and document structure.
- Create a table of contents for a structured report.
- Use Mail Merge for personalized documents.
- Use references and review tools.
- Prepare CVs, letters, reports and business documents.
- Print, export and share documents professionally.

COURSE OUTLINE

Lesson	Topic
1	Getting Started with Microsoft Word
2	Understanding the Word Interface
3	Creating, Opening, Saving and Organizing Documents
4	Text Entry, Selection and Editing
5	Character Formatting
6	Paragraph Formatting
7	Page Layout and Document Setup
8	Lists, Tabs and Indentation
9	Working with Tables
10	Pictures, Shapes, Icons and Text Boxes
11	Headers, Footers and Page Numbers
12	Styles, Themes and Document Structure
13	Table of Contents and Navigation
14	Mail Merge
15	References and Review Tools
16	Professional Letters, CVs and Reports
17	Printing, PDF Export and Sharing
18	Final Professional Word Project

LESSON 1: GETTING STARTED WITH MICROSOFT WORD

Introduction

Microsoft Word is a word-processing program designed for producing written documents. Unlike a plain text editor, Word provides tools for formatting, page design, tables, graphics, references, reviewing and professional printing.

What Word Is Used For

- Letters and memos
- School assignments and projects
- CVs and résumés
- Reports and proposals
- Minutes of meetings
- Invoices and simple forms
- Training manuals and newsletters

Word Processing Concepts

A document is the file you create. Word allows the document to contain text and other objects such as tables, pictures, charts, shapes and hyperlinks. Most modern Word documents are saved in DOCX format.

Starting and Closing Word

Word can be opened from the Start menu, desktop shortcut or an existing Word file. Before closing, save important changes. If Word asks whether to save unsaved work, read the prompt carefully.

Step-by-Step Practical

1. Open Microsoft Word.
2. Choose Blank document.
3. Type: My First Professional Word Document.
4. Press Enter twice and type a short paragraph about Ethan Digital Academy.
5. Use Ctrl+S, choose a folder, name the file EDA-Word-Practice-01.docx and save.
6. Close Word and reopen the saved file.

Real-Life Application / Case Study

A new office assistant is asked to type a one-page meeting notice. Understanding how to start Word, create a document and save it correctly prevents loss of work and creates an organized record.

Review Questions

7. What is word processing?
8. Mention five documents that can be created in Word.
9. What is the common modern Word file extension?
10. Why should a document be saved early?

Assignment

Create a one-page document titled 'How Microsoft Word Helps in the Workplace' and save it using a meaningful filename.

LESSON 2: UNDERSTANDING THE WORD INTERFACE

Microsoft Word Interface

Simplified labelled learning example

Figure 1. Instructional visual for Understanding The Word Interface.

Introduction

The Word interface is the working environment containing commands, document controls and the page on which content is created.

Major Parts of the Interface

- Title Bar - displays the document and application name.
- Quick Access Toolbar - provides frequently used commands such as Save and Undo.
- File tab - opens Backstage view for saving, printing, sharing and options.
- Ribbon - organizes commands into tabs and groups.
- Document area - the page where content is entered.
- Ruler - assists with margins, indents and tabs.
- Status Bar - displays page, word and view information.
- Scroll bars - move through the document.
- Zoom control - changes the viewing size without changing printed font size.

Ribbon Tabs

Common tabs include Home, Insert, Design, Layout, References, Mailings, Review and View. Each tab groups related commands. The exact interface can vary slightly by Word version.

Views and Zoom

Print Layout is commonly used for document creation because it approximates the printed page. Zoom affects only the on-screen view.

Step-by-Step Practical

11. Open a blank document.

12. Identify the Title Bar, Ribbon, ruler, document area, status bar and zoom control.
13. Click Home, Insert, Layout, References and Review and observe how the commands change.
14. Change zoom to 80%, then 120%, and return to a comfortable level.
15. Use the View tab to inspect available document views.

Real-Life Application / Case Study

A learner who knows where commands are located spends less time searching and can follow workplace instructions more confidently.

Review Questions

16. What is the Ribbon?
17. What is the purpose of the Status Bar?
18. Does zoom change the actual font size?
19. Name five Ribbon tabs.

Assignment

Draw or describe the Word interface and label at least eight parts.

LESSON 3: CREATING, OPENING, SAVING AND ORGANIZING DOCUMENTS

Creating and Saving a Document

A reliable file-management workflow

Figure 2. Instructional visual for Creating, Opening, Saving And Organizing Documents.

Introduction

Professional document work requires both writing skills and reliable file management.

New and Existing Documents

New creates a fresh document; Open retrieves an existing document. Recent files can speed up access, but important files should still be stored in organized folders.

Save and Save As

Save updates the current file. Save As creates a new copy, changes the filename, changes the location or chooses another format.

Common Formats

- DOCX - standard editable Word document.
- PDF - fixed-layout format useful for distribution.
- TXT - plain text without Word formatting.
- RTF - rich text format supported by many word processors.

File Organization

Use folders and meaningful names such as EDA_Training_Report_September_2026.docx instead of Document1.docx. Avoid creating unnecessary duplicate versions.

Step-by-Step Practical

20. Create a folder named Ethan Digital Academy Word Course.
21. Inside it create folders named Lessons, Assignments and Final Project.

22. Create a new Word document and save it in Lessons as Lesson-03-Practice.docx.
23. Use Save As to create a second copy in Assignments.
24. Export or save an additional PDF copy if your Word version provides that option.

Real-Life Application / Case Study

A training administrator keeps every file on the desktop with names such as Document1 and New Document. When a client requests an old report, it is difficult to locate. A simple folder and naming system solves the problem.

Review Questions

25. Differentiate Save and Save As.
26. Why are meaningful filenames important?
27. What is the difference between DOCX and PDF?
28. Give an example of a professional filename.

Assignment

Create an organized course folder containing at least three Word documents with professional filenames.

LESSON 4: TEXT ENTRY, SELECTION AND EDITING

Introduction

Editing means changing document content accurately and efficiently.

Insertion Point and Selection

The blinking insertion point shows where new text will appear. Text can be selected with the mouse or keyboard before formatting, moving or deleting it.

Core Editing Commands

- Copy duplicates selected content.
- Cut removes selected content and places it on the Clipboard.
- Paste inserts Clipboard content.
- Undo reverses a recent action.
- Redo repeats or restores an undone action.
- Find locates words or phrases.
- Replace changes repeated text efficiently.

Useful Shortcuts

- Ctrl+C - Copy
- Ctrl+X - Cut
- Ctrl+V - Paste
- Ctrl+Z - Undo
- Ctrl+Y - Redo
- Ctrl+A - Select All
- Ctrl+F - Find
- Ctrl+H - Replace

Step-by-Step Practical

29. Type three short paragraphs.
30. Select the second paragraph and copy it below the third.
31. Cut one sentence and paste it at the beginning.
32. Use Undo and Redo.
33. Use Find to locate a repeated word.
34. Use Replace to change that word throughout the practice document.

Real-Life Application / Case Study

An administrator receives a report in which the old department name appears 25 times. Find and Replace can update the document quickly, but the replacement should be reviewed to ensure every change is appropriate.

Review Questions

35. What is the insertion point?
36. Differentiate Copy and Cut.
37. What does Ctrl+H do?
38. Why should Replace All be used carefully?

Assignment

Edit a supplied or self-created one-page passage using Copy, Cut, Paste, Find and Replace.

LESSON 5: CHARACTER FORMATTING

Character and Paragraph Formatting

Formatting should improve readability, not distract

BEFORE

TRAINING REPORT

this is a sample paragraph. it has poor hierarchy and uneven spacing.

- item one
- item two

AFTER

TRAINING REPORT

This is a professionally formatted paragraph. It uses clear hierarchy, consistent spacing and readable typography.

- Clear headings
- Consistent body text
- Balanced spacing

Figure 3. Instructional visual for Character Formatting.

Introduction

Character formatting changes the appearance of letters, numbers and symbols without changing the underlying wording.

Font Controls

- Font family
- Font size
- Bold
- Italic
- Underline
- Font color
- Text highlight
- Change Case
- Superscript and subscript

Professional Formatting Principles

Use readable fonts, consistent sizes and limited emphasis. Headings should stand out, but body text should remain comfortable to read. Excessive colors, underlining and decorative fonts can reduce professionalism.

Format Painter

Format Painter copies formatting from one selection and applies it to another, helping maintain consistency.

Step-by-Step Practical

39. Type a heading and two paragraphs.
40. Format the heading in a larger bold font.

41. Apply italic to one important phrase and bold to another.
42. Use text highlight on one temporary review item, then remove it.
43. Use Format Painter to copy a heading format to another heading.
44. Experiment with Change Case and then restore the correct wording.

Real-Life Application / Case Study

A business proposal with six unrelated fonts and many bright colors can look less credible even when the content is strong. Consistent typography supports professional communication.

Review Questions

45. What is character formatting?
46. Name six character-formatting tools.
47. What is Format Painter used for?
48. Why should decorative formatting be limited?

Assignment

Create a one-page announcement with a clear title, subtitle and body text using a consistent formatting hierarchy.

LESSON 6: PARAGRAPH FORMATTING

Introduction

Paragraph formatting controls how complete paragraphs are positioned and spaced on the page.

Alignment

- Left - common for general text.
- Center - useful for selected headings.
- Right - sometimes used for dates or special layouts.
- Justify - aligns text to both left and right margins.

Spacing and Indentation

Line spacing controls distance between lines. Paragraph spacing controls space before or after paragraphs. Indents move paragraph edges inward.

Bullets and Numbering

Bullets are useful for unordered items; numbering is useful when sequence or priority matters.

Borders and Shading

Borders and shading can emphasize selected paragraphs, but should be applied sparingly.

Step-by-Step Practical

49. Type four paragraphs.
50. Apply different alignments and observe the effect.
51. Set appropriate line spacing for the body text.
52. Add space after paragraphs instead of pressing Enter repeatedly.
53. Create a bulleted list of five digital skills.
54. Create a numbered five-step procedure.
55. Apply a subtle border to a short notice.

Real-Life Application / Case Study

A report created with random blank lines often changes badly when text is edited. Using paragraph spacing produces a more stable and professional layout.

Review Questions

56. Name the four main paragraph alignments.
57. Differentiate line spacing and paragraph spacing.
58. When should numbering be preferred to bullets?
59. What is an indent?

Assignment

Format a two-page report using consistent paragraph spacing, alignment, bullets and numbering.

LESSON 7: PAGE LAYOUT AND DOCUMENT SETUP

Page Layout

Margins, orientation and page breaks

Figure 4. Instructional visual for Page Layout And Document Setup.

Introduction

Page layout determines the physical structure of the document page.

Margins

Margins are the blank spaces around page content. Standard professional margins are suitable for most documents, while special documents may require custom margins.

Orientation and Size

Portrait is taller than it is wide; landscape is wider than it is tall. A4 is commonly used for office and academic documents in many countries.

Breaks

A page break moves following content to a new page. Section breaks allow different formatting in different sections, such as orientation, headers or columns.

Columns

Columns can be used for newsletters, brochures and selected layouts.

Step-by-Step Practical

60. Create a three-page document.
61. Set the page size to A4.
62. Change margins and observe the effect, then choose a professional setting.
63. Insert a page break rather than pressing Enter repeatedly.
64. Create a new section and, where supported, change that section to landscape.
65. Create a short two-column section.

Real-Life Application / Case Study

A report contains a wide financial table that does not fit comfortably in portrait orientation. A separate landscape section can accommodate the table while the rest of the report remains portrait.

Review Questions

- 66. What are margins?
- 67. Differentiate portrait and landscape.
- 68. Why is a page break better than repeated blank lines?
- 69. What is a section break useful for?

Assignment

Prepare a document containing portrait pages and one landscape section for a wide table.

LESSON 8: LISTS, TABS AND INDENTATION

Introduction

Lists, tab stops and indents help organize information without using repeated spaces.

Bulleted and Numbered Lists

Use multilevel lists for structured outlines. Keep list punctuation and capitalization consistent.

Tabs

Tab stops align text at predictable positions. They are more reliable than pressing the spacebar many times.

Indents

First-line, hanging, left and right indents support paragraphs, references and structured content.

Step-by-Step Practical

70. Create a numbered list of six course registration steps.
71. Convert a copy to bullets.
72. Create a two-level outline with main points and subpoints.
73. Use a hanging indent for a short reference list.
74. Use tab stops to align simple labels and values.

Real-Life Application / Case Study

An office worker aligns a price list using spaces. When fonts change, the columns become uneven. Tabs or a table provide more reliable alignment.

Review Questions

75. What is a multilevel list?
76. Why should spaces not be used for column alignment?
77. What is a hanging indent?
78. Give one use of tab stops.

Assignment

Create a structured one-page policy document using a multilevel list and appropriate indentation.

LESSON 9: WORKING WITH TABLES

Working with Tables

Rows, columns, headings and clear alignment

S/N	Student Name	Course	Status
1	Ada Bello	Microsoft Word	Active
2	Tunde James	Microsoft Excel	Active
3	Mira Okafor	PowerPoint	Completed
4	David Cole	Computer Appreciation	Active

Figure 5. Instructional visual for Working With Tables.

Introduction

A table organizes information into rows and columns and is useful for records, schedules, comparisons and forms.

Creating Tables

Tables can be inserted by choosing the number of rows and columns. Data should have clear headings.

Editing Structure

- Insert or delete rows and columns.
- Merge cells for selected headings.
- Split cells when more divisions are required.
- Adjust row height and column width.
- Use AutoFit where appropriate.

Formatting Tables

Use readable header rows, consistent alignment and moderate borders or shading. Avoid overcrowding cells.

Step-by-Step Practical

79. Insert a 5-column, 8-row table.
80. Create headings: S/N, Student Name, Course, Amount, Status.
81. Enter sample records.
82. Add another row and column.
83. Merge cells to create a table title.
84. Format the header row professionally.
85. Adjust widths so all information is readable.

Real-Life Application / Case Study

Ethan Digital Academy needs a simple attendance register. A table can organize names, dates and attendance status more clearly than manually spaced text.

Review Questions

- 86. What is a table?
- 87. What does Merge Cells do?
- 88. Why should tables have headings?
- 89. Mention three ways to change table structure.

Assignment

Create a professional weekly training timetable using a Word table.

LESSON 10: PICTURES, SHAPES, ICONS AND TEXT BOXES

Pictures and Text Wrapping

Place visual objects without covering important text

Figure 6. Instructional visual for Pictures, Shapes, Icons And Text Boxes.

Introduction

Visual objects can support communication when they are relevant and arranged carefully.

Pictures

Pictures can be inserted, resized, cropped and positioned. Maintain reasonable proportions to avoid distortion.

Text Wrapping

Wrapping controls how text flows around an object. Common choices may include In Line with Text, Square, Tight, Top and Bottom, Behind Text and In Front of Text.

Shapes, Icons and Text Boxes

Shapes can create callouts and diagrams. Text boxes position selected text independently. Icons can provide simple visual symbols where available.

Alignment and Layering

Objects can be aligned, distributed, brought forward or sent backward to create an orderly layout.

Step-by-Step Practical

90. Insert a suitable picture.
91. Resize it using a corner handle.
92. Crop unnecessary edges.
93. Try different text-wrapping options.
94. Insert a shape and type a short message inside it.
95. Insert a text box for contact information.

96. Align the objects neatly.

Real-Life Application / Case Study

A training flyer becomes difficult to read because a large image covers the text. Proper resizing, wrapping and object order restore readability.

Review Questions

- 97. What is text wrapping?
- 98. Why should pictures be resized from corner handles?
- 99. What is a text box?
- 100. What do Bring Forward and Send Backward control?

Assignment

Create a one-page professional course announcement containing text, a picture, a shape and a text box.

LESSON 11: HEADERS, FOOTERS AND PAGE NUMBERS

Headers, Footers and Page Numbers

Repeating information supports navigation

Figure 7. Instructional visual for Headers, Footers And Page Numbers.

Introduction

Headers and footers are repeating areas at the top and bottom of pages.

Typical Header/Footer Content

- Organization name
- Document title
- Date or version
- Confidentiality notice
- Page numbers

Page Numbers

Automatic page numbers update as pages are added or removed. They may be placed at the top, bottom or margin depending on the document style.

Different First Page

Formal reports may use a cover page without the same header or footer as the main document.

Step-by-Step Practical

101. Create a three-page report.
102. Insert Ethan Digital Academy in the header.
103. Add an automatic page number in the footer.
104. Enable Different First Page if available and inspect the result.
105. Edit the footer to add a short document title.

Real-Life Application / Case Study

A 25-page training manual without page numbers is difficult to reference during class. Automatic numbering makes navigation and discussion easier.

Review Questions

- 106. What is a header?
- 107. What is a footer?
- 108. Why should page numbers be automatic?
- 109. What is Different First Page used for?

Assignment

Prepare a four-page report with a clean first page and appropriate headers, footers and page numbers.

LESSON 12: STYLES, THEMES AND DOCUMENT STRUCTURE

Styles and Automatic Table of Contents

Use heading styles to structure long documents

Figure 8. Instructional visual for Styles, Themes And Document Structure.

Introduction

Styles are named sets of formatting that help keep long documents consistent.

Built-in Styles

Heading 1, Heading 2, Heading 3 and Normal are useful for creating a clear hierarchy.

Why Styles Matter

Changing a style can update many headings consistently. Heading styles also support navigation and automatic tables of contents.

Themes

Themes coordinate document fonts, colors and effects. Professional documents should use a restrained and consistent theme.

Step-by-Step Practical

- 110. Create a document with one main title, three major sections and two subsections.
- 111. Apply Heading 1 to major sections and Heading 2 to subsections.
- 112. Use Normal for body text.
- 113. Modify one heading style and observe the consistent change.
- 114. Open the Navigation Pane if available and use headings to move through the document.

Real-Life Application / Case Study

A 40-page manual formatted manually becomes difficult to update. Styles allow the organization to change the heading design consistently across the document.

Review Questions

- 115. What is a style?
- 116. Why are Heading styles important?
- 117. How do styles support navigation?
- 118. What is a document theme?

Assignment

Create a structured three-page mini-manual using Heading 1, Heading 2 and Normal styles.

LESSON 13: TABLE OF CONTENTS AND NAVIGATION

Introduction

A table of contents lists major document headings and their page locations, helping readers navigate long documents.

Preparing the Document

An automatic table of contents depends on properly applied heading styles.

Creating the TOC

Use the References tab to insert an automatic table of contents. After content changes, update the table so page numbers and headings remain accurate.

Navigation

The Navigation Pane can display headings and make it easier to move around a long document.

Step-by-Step Practical

119. Create at least four sections using Heading 1 and several subsections using Heading 2.
120. Place the cursor near the beginning of the document.
121. Insert an automatic table of contents.
122. Add another section later in the document.
123. Update the table of contents.
124. Use the Navigation Pane to move between sections.

Real-Life Application / Case Study

A training manual changes after a new lesson is inserted. A manually typed contents page becomes incorrect, while an automatic table can be updated.

Review Questions

125. What must be applied before an automatic table of contents works properly?
126. Why should a TOC be updated?
127. What does the Navigation Pane show?
128. Where is the Table of Contents command commonly found?

Assignment

Create a five-section report with an automatic table of contents.

LESSON 14: MAIL MERGE

Mail Merge Workflow

One template + recipient data = personalized documents

Figure 9. Instructional visual for Mail Merge.

Introduction

Mail Merge combines one main document with a data source to create multiple personalized documents.

Common Uses

- Personalized letters
- Certificates
- Labels
- Envelopes
- Notices sent to many recipients

Main Components

The main document contains common text. The recipient list contains changing information such as name, address or course. Merge fields mark where personalized data will appear.

Merge Process

A typical process is: prepare the main document, select recipients, insert merge fields, preview results, then finish and merge.

Step-by-Step Practical

129. Create a simple recipient list with five names and courses.
130. Create a course-completion letter.
131. Start Mail Merge for letters.
132. Connect or create the recipient list.
133. Insert Name and Course merge fields.
134. Preview each record.

135. Complete the merge to create personalized letters.

Real-Life Application / Case Study

An academy needs to prepare 100 course-completion letters. Typing each letter separately wastes time and increases errors. Mail Merge can produce personalized letters from one template and a recipient list.

Review Questions

136. What is Mail Merge?
137. What is a data source?
138. What is a merge field?
139. Mention three uses of Mail Merge.

Assignment

Create five personalized invitation letters using Mail Merge.

LESSON 15: REFERENCES AND REVIEW TOOLS

Review Tools

Comments, Track Changes and proofing support collaboration

Figure 10. Instructional visual for References And Review Tools.

Introduction

Word provides tools for checking, reviewing and documenting professional or academic work.

Spelling and Grammar

Proofing tools can identify possible spelling and grammar issues, but users should review suggestions rather than accept every change automatically.

Comments and Track Changes

Comments allow reviewers to leave notes. Track Changes records insertions, deletions and formatting changes for review.

References

Depending on the document, Word can assist with footnotes, citations, captions and bibliographies. Academic requirements should determine the correct citation style.

Word Count

Word Count helps monitor assignment or report length.

Step-by-Step Practical

140. Type a short paragraph containing intentional spelling errors and run the proofing tools.
141. Add a comment to a sentence.
142. Turn on Track Changes and edit the paragraph.
143. Review the recorded changes.
144. Insert a footnote or citation if available in your version.
145. Check the document word count.

Real-Life Application / Case Study

A manager reviews a policy written by an assistant. Track Changes allows the assistant to see exactly what was edited, while comments explain why some revisions are requested.

Review Questions

- 146. What is Track Changes?
- 147. What is the purpose of comments?
- 148. Why should proofing suggestions be reviewed?
- 149. What does Word Count measure?

Assignment

Exchange a one-page document with another learner and review it using comments and Track Changes.

LESSON 16: PROFESSIONAL LETTERS, CVS AND REPORTS

Professional Documents

Choose a structure that matches the purpose

Figure 11. Instructional visual for Professional Letters, Cvs And Reports.

Introduction

Microsoft Word is commonly used to prepare formal documents that represent an individual or organization.

Professional Letters

A formal letter normally includes appropriate sender/recipient information, date, salutation, clear subject or purpose, body, closing and name/signature as required.

CV / Résumé

A CV should present accurate information clearly. Typical sections may include contact information, profile, education, experience, skills and relevant achievements.

Reports

Reports usually use a title, headings, logical sections, consistent formatting, page numbering and, for longer documents, a table of contents.

Professional Principles

- Accuracy
- Consistency
- Readable layout
- Correct spelling and grammar
- Appropriate tone
- No unnecessary decoration

Step-by-Step Practical

150. Create a professional one-page business letter.

151. Create a clean two-page sample CV using fictional or non-sensitive information.
152. Create a three-page report with headings, a table and page numbers.
153. Review all three documents for consistency and spelling.

Real-Life Application / Case Study

A job applicant has strong experience but submits a poorly organized CV with inconsistent fonts and errors. Improving the document structure and proofreading can make the information easier for an employer to assess.

Review Questions

154. List major parts of a formal letter.
155. Mention five common CV sections.
156. Why should a report use headings?
157. What makes a document professional?

Assignment

Prepare a formal application letter and a clean sample CV.

LESSON 17: PRINTING, PDF EXPORT AND SHARING

Final Publishing Workflow

Check before you print, export or share

Figure 12. Instructional visual for Printing, Pdf Export And Sharing.

Introduction

Before a document is delivered, it should be checked for both content and page presentation.

Print Preview

Print Preview helps detect unwanted blank pages, poor page breaks, incorrect orientation and other layout issues before paper is used.

Print Settings

Users may select printer, page range, number of copies, orientation, paper size and other available options.

PDF Export

PDF is useful when the recipient should see a stable layout. Keep the editable Word file when future editing may be required.

Final Quality Check

- Correct filename
- Correct pages and margins
- No spelling errors
- Consistent headings
- Tables and pictures fit the page
- Headers, footers and numbering correct

Step-by-Step Practical

158. Open a completed report.
159. Use Print Preview and inspect every page.

- 160. Correct any unwanted page break or layout problem.
- 161. Choose an appropriate page range in the print settings without printing if unnecessary.
- 162. Export a PDF copy.
- 163. Open the PDF and verify that the layout is correct.

Real-Life Application / Case Study

A proposal looks correct in editing view but contains an unexpected blank page when printed. Print Preview catches the problem before the document is sent to a client.

Review Questions

- 164. Why is Print Preview important?
- 165. When is PDF useful?
- 166. Why should the editable DOCX sometimes be retained?
- 167. Mention four items in a final quality check.

Assignment

Submit one professional document in both DOCX and PDF formats.

LESSON 18: FINAL PROFESSIONAL WORD PROJECT

Introduction

The final project combines the major skills developed throughout the course into one complete professional document.

Project Brief

Create a professional Ethan Digital Academy training report of at least six pages. It should demonstrate clear structure, accurate formatting and appropriate use of Word features.

Required Elements

- Professional cover page
- Automatic table of contents
- Heading styles
- Well-formatted paragraphs
- Bulleted or numbered list
- At least one table
- At least one relevant image or shape
- Header/footer and automatic page numbers
- A short reference or footnote section where appropriate
- Professional final layout

Assessment Focus

The work will be assessed for accuracy, structure, formatting consistency, practical use of Word tools, readability, proofreading and final presentation.

Step-by-Step Practical

168. Plan the report structure before typing.
169. Create the cover page.
170. Write the report using Heading styles.
171. Insert the required table and visual object.
172. Add header/footer and page numbering.
173. Insert and update the table of contents.
174. Proofread the complete report.
175. Inspect Print Preview.
176. Save the editable DOCX.
177. Export and verify the PDF.

Real-Life Application / Case Study

A professional report often passes through planning, drafting, formatting, review and final publishing. The final project reproduces this workplace process.

Review Questions

178. Why should a long document be planned before formatting?
179. Which Word feature supports an automatic contents page?
180. Why should the PDF be checked after export?
181. List six features required in the final project.

Assignment

Complete and submit the final professional Word project in DOCX and PDF formats.

FINAL QUIZ - 30 QUESTIONS

182. What is Microsoft Word?
183. Mention five uses of Word.
184. What is the Ribbon?
185. What is the Quick Access Toolbar?
186. Differentiate Save and Save As.
187. What is DOCX?
188. What is PDF?
189. What does Ctrl+C do?
190. What does Ctrl+H do?
191. What is Format Painter?
192. Name four paragraph alignments.
193. What is line spacing?
194. What is a page break?
195. What is a section break?
196. What is landscape orientation?
